AS-BUILT NARRATIVE

WASTE STORAGE 313: LEDGEVIEW FARM'S

Planning and design of a waste storage structure for Ledgeview Farm's started in 2009. Soil borings were conducted in 6-2009 and soils tested by AECOM. Adequate soil type and depth were found such that a structure could be sited and built to meet current NRCS Standards. In Fall of 2009 Ledgeview Farm's began logging and land grubing the area. Preliminary design and plans were developed and collaborated with NRCS and DATCP. In 2010 Ledgeview Farms began stripping topsoil and had some clean clay (CL) fill hauled into the site from a construction project. Plans and specifications were revised and developed by Brown County LWCD on behalf of Ledgeview Farm's and were submitted and reviewed by DATCP. Plans and Specifications were approved by DATCP in 11/14. Plans were supplied to Ledgeview Farm's which they used to work on the site in varying degrees as they had time and equipment. Brown County assisted them in staking area extent for project location. Plans and specifications were submitted to WDNR 4/2015. Plans were reviewed and met current standards but, a failure analysis was required to complete the review. A failure analysis response was sent but, more information was requested. The plans were withdrawn until the needed data could be gathered and submitted.

Ledgeview Farms aquired some scrapers for their large tractors and began taking on more earth moving duties between planting and hay harvesting. July 8th, 2015 (b) (6)(b) (6)(b)

Brown County was contacted and conducted on—site inspections of equipment, materials and methods of excavation for the compaction of transfer pipe and storage facility. Brown County conducted inspection of sub—base foundations, forming, materials and curing for concrete tank and storage slab. Brown County put together an after—the—fact plan showing the transfer system. The structures sat for several months while Ledgeview Farms worked on harvesting crops, new milking parlor project and installing a pump in the reception tank. During this time Brown County developed further information for failure analysis and this was submitted to WDNR in 9/15. The structures clay liner testing was conducted by River Valley Testing and results show it meets NRCS 313 and WCS 300. An As—Built Plan was developed by Brown County documenting construction activities to ensure structures substantially met approved plan and applicable standards required by Brown County Animal Waste Ordinance.

Please refer to inspection plan, attached pages and documents to this plan for As-Built information.

Waste Storage Facility 313 (As-Built):

M.O.L 803.0 — Post installed with sign showing location and elevation of post on side slope is the M.O.L elevation of 803.0

M.O.L Volume - 4,460,399 Gallons

Total Volume - 5,720,644 Gallons

Saftey Volume above M.O.L - 1,260,245 Gallons

As—Built capacity exceeds 180 storage requirement calculated in attached design of 3,696,461 gallons.

Waste Transfer 634 (As-Built):

Two celled concrete tank was a design developed by NRCS and sited by Brown County.

Wet Cell - 12'Wx10'Lx8'D

Dry Cell - 12'Wx16'Lx8'D

Pumped Transfer Pipe - 12" D2241 SDR 21 PVC - 233' (Hydraulic piston pump)

COUNTY:

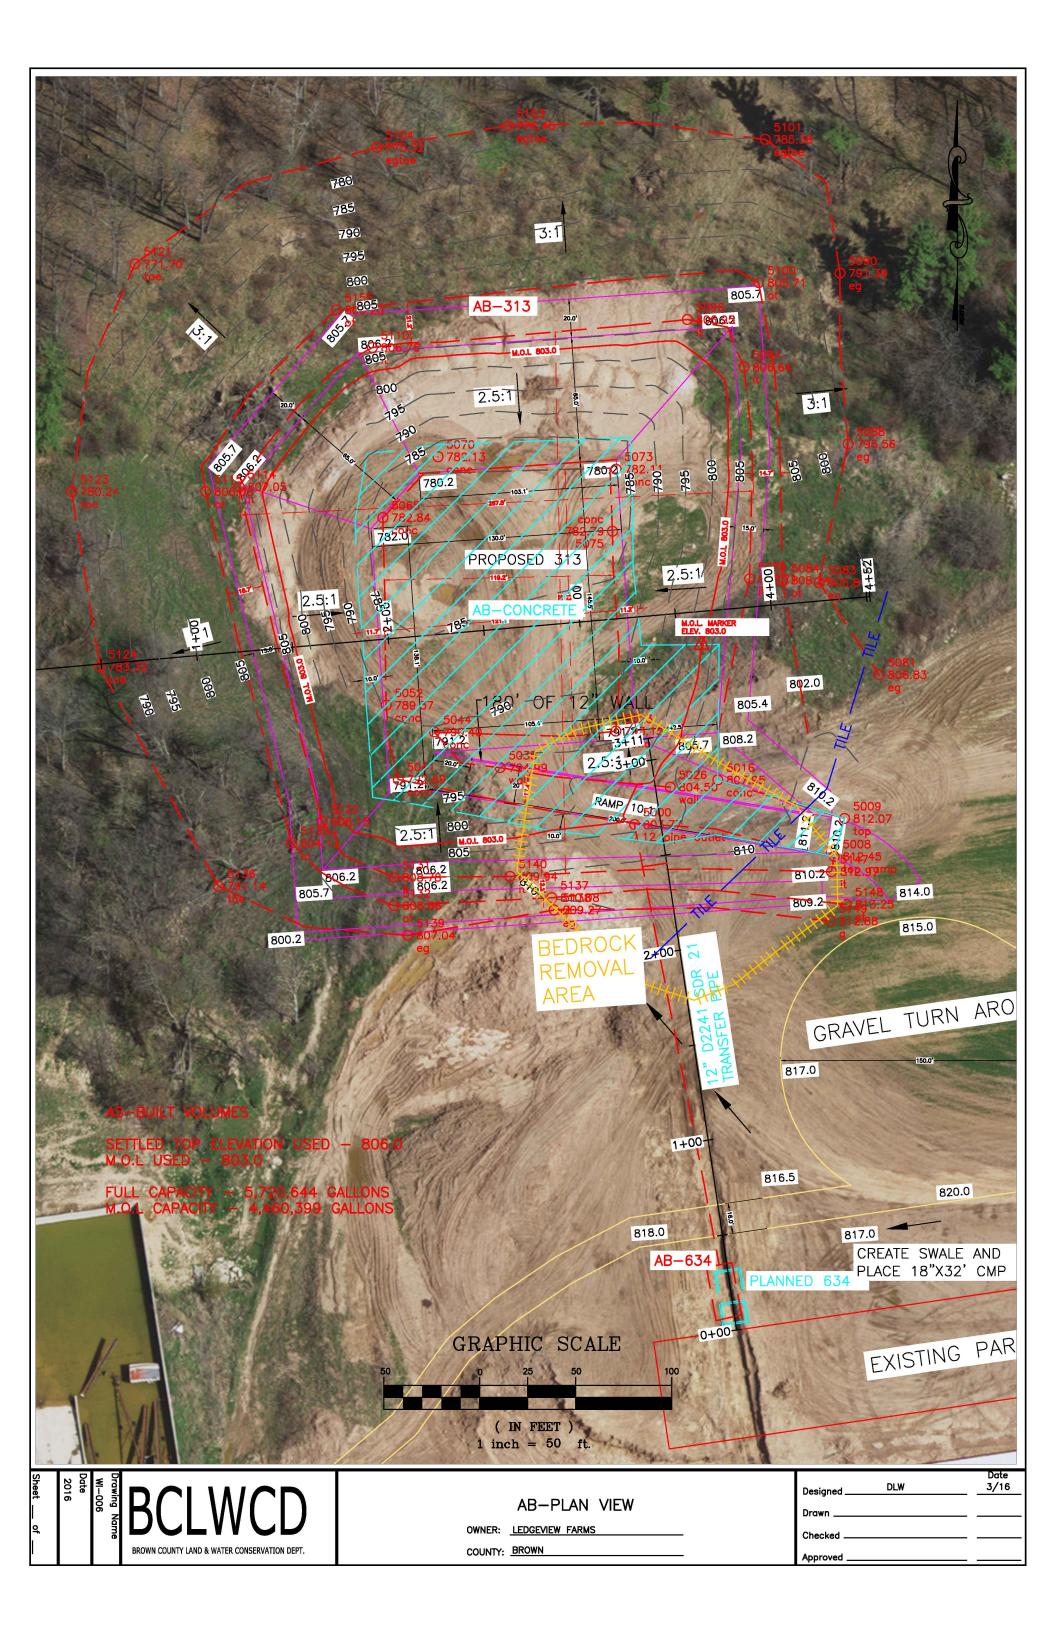

Gravity Drain Transfer Pipe (future parlor waste) 6" D1785 SCH 40 - 233' + routed to parlor in barn by owner and parlor designer. In trench next to 12" pvc.

REPORT OF LABORATORY ANALYSIS OF SOIL

1280 Parkview Road Green Bay, WI 54304 ph 920-347-9040 fax 920-347-9044

LEDGEVIEW FARMS, LLC DE PERE, WISCONSIN Project:

Copies:

Mr. Dave Wetenkamp Brown County LWCD e)wetenkamp_dl@co.brown.wi.us

RVT File No G15-256 **Revised December 10, 2015

GENERAL: Scope of Work:

Date:

Perform Percent Material Passing the #200 Sieve, Atterberg Limits, Hydraulic Conductivity and Visual Classification of Soils on the submitted samples.

Date of Test:

**Technician:

K Orthober / M Wisneski

Sampled By: Soil Description:

11/4/15 **Technician:
I MacMillan of RVT Date Delivered:
LEAN CLAY, with Sand, reddish-brown (CL)

11/4/15

RESULTS: Test Method:

ASTM D2487 ASTM D1140 ASTM D4318 ASTM D5084 Classification of Soils for Engineering Purposes Percent Material Finer than the No 200 Sieve Liquid Limit, Plastic Limit, and Plasticity Index of Soils Hydraulic Conductivity Test

Sample Number	3256	Project Specifications
USCS Classification	CL	CL or CH
Percent Passing #200 Sieve (P200)	84	50% Minimum
Liquid Limit (LL)	44	(965)
Plastic Limit (PL)	18	(CTATA)
Plasticity Index (PI)	26	12 Minimum
**Hydraulic	2.1 x 10 ⁻⁸	1 x 10 ⁻⁷ cm/sec Maximum

REMARKS:

The sample above meets project specifications. A portion of the sample will be held for 30 days after the date of this report and then will be discarded unless notified otherwise.
